

Collaboration Made Simple

By Client Tech

Microsoft Teams is a new, digital hub software that allows conversation, assignments, content and project management to happen in one place. It not only allows companies a way to communicate with ease, but it also allows classrooms and communities to streamline their abilities to chat, send information and collaborate in one online place.

The new software speeds up performance by allowing you to stay organized with all class or work needs. The Microsoft Teams software provides real-time updates and storage while allowing you to use your favorite Office apps, like Class Notebook, for example. In addition, Microsoft Teams encourages companies and teams to utilize the software to host meetings with HD video, VoIP, and dial-in audio conferencing options.

By using the apps you're familiar with, you're able to completely customize the way the software works and performs. If you're using a particular app more than another, dock it at the top of the software allowing for easy access while streamlining the switch to other applications throughout the day.

The new Microsoft Teams allows for easier communication, a customized workspace, secure data, and storage as well as team collaboration. Whether it's a classroom or a business setting, the ability to connect various people, ideas and creativity, allows for more productivity. Teams brings together a variety of pros, but more than anything, it allows for a shared workspace that cultivates success, ideas, and innovation.

Client Tech can help set your business, school, or home up with Teams to help ease the collaboration process. Chat, share files and work with dozens of apps all in one place. Security, streamlined processes and success has never been easier - or so simple. Let us help you find the best fit for your situation -- only with Client Tech, an Office 365 expert.
